

Safety Intelligence Reports (SIR)

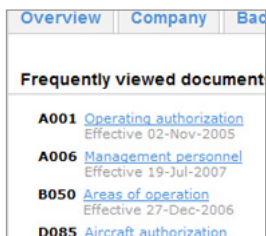

Operator due diligence for sophisticated air charter buyers

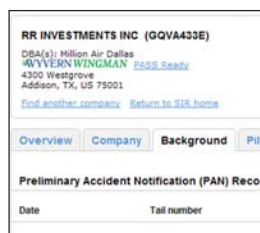

A subscription to Safety Intelligence Reports (SIR) gives you access to detailed, accurate and up-to-date background information about all Part 135 air charter operators, their fleets, management personnel, pilots, insurance and accidents/incidents. SIR is an essential service for any sophisticated, corporate or large-volume charter buyer who sources lift from a portfolio of charter providers.

Access critical information you need to make decisions

SIR was designed to make it easy for you to quickly and discreetly get the information you need to make informed decisions about current and potential air charter vendors. SIR updates operator records using original data sources each night to ensure that you have the most up-to-date and accurate information available. Since it is web-based, you can access SIR from any internet connection.

OpSpec documents

Accident/incident information

Access OpSpec documentation for all Part 135 operators

SIR gives you unparalleled access to a full list of Operations Specifications documentation currently on file with the FAA for a given operator. You can view, print and download these documents (such as D085s) as needed.

View operator accident & incident data

The SIR system requests and processes frequent Operator Background Checks (OBCs) on operators typically used by SIR subscribers. The Operator Background section of a given operator's SIR will list all available AID, EIS and NTSB reports.

Monitor operators with Wyvern Safety Alerts

Once you specify your preferred vendors or "partners", the SIR system will notify you via email of any significant changes to the status of those operators. Fleet additions, management personnel changes and accident/incidents alerts will be sent directly to your email address along with links to any updated OpSpec documentation.

Key benefits

- View listings of all aircraft currently on certificate for Part 135 operators
- View summary and detail reports for all AID, EIS & NTSB records dating back 10 years
- Monitor specified operator changes with Wyvern Safety Alert e-mails
- Access contact and management personnel information
- View and download D085s and other important OpSpec documents
- View and download insurance documentation
- View critical pilot roster details such as hours and an FAA PBC (Pilot Background Check)
